

Tell Me About Implant Dentistry

No matter how diligently you may brush, floss, or visit your dentist, sometimes your teeth just can't hold up with age. As you grow older, it is not unlikely for one or more teeth to fall out from sickness, injury, or decay. If you're missing teeth, surgical implants may be the best solution to complete your smile again.

In this program we plan to educate you as much as possible on the benefits of implant dentistry. We will tell you what implants are, what they're made of, the different types of implants, the benefits of implants, the possible risks of implants, the length of the process and how to tell if implants are the best choice for you.

SEPTEMBER 15TH 3PM
